Abstract—The main purpose of this project 'Sansad Adarsh Gram Yojana App' was to create a platform and provide both people and government so that there can be a transparency between them. This app provides a medium for people to understand the notion of this yojana so that they can understand why it is important and what the rules that will be helpful for them are.

By creating this application we have created a forum which is linked by Aadhar card and your phone number for validation. Further you can gather information from the forum about this yojana. Then you can also give feedback based on whether it be a complaint or an idea to improve one’s village. Our Prime Minister wants this to be an open communication blog where people as per their needs can call out and if some things are not happening then can complain.

Keywords—Android Application, Firebase database, Development progress App, MP Monitor.

I. INTRODUCTION

The vision of our Hon'ble Prime Minister is that we have to build the nation we have to start from the villages" and he believes that "If every MP transforms villages in his/her constituency into model villages, large number of villages in the country would have seen holistic development. About this App is have direct access to the works that are going on under Sansad Adarsh Gram Yojana Launched by the Government.

Presently handheld devices such as smartphones are using very huge. In short, we are using them too easy to solve our work. So we can use application that falls into this category which is SAGY app developed for Android phones. This application will help salespersons in managing the various types of Records such as MP’s details, nodal officer details, village list and help to easily access the information regarding updates and progress. To record the details of the villages, nodal officers, MP’s and projects is a time-consuming process.

Also difficult to retrieve the previous records of progress and other details regarding NGO’s.

II. REVIEW OF LITERATURE

A number of schemes introduced and developed to improve the comfort and quality for villagers.
The development of model villages, called Adarsh Grams, through the implementation of existing schemes, and certain new initiatives to be designed for the local context, which may vary from village to village.

Creating models of local development which can be replicated in other villages. Using mobile application as a method to provide a platform for communication and to keep eye on the progress going on in the villages

B. REALITY:

There are many applications for SAGY(Sansad Adarsh Gram Yojana) in which there are many issues or say troubles which can be updated. Say for one the villagers usually are not able to type things or know how to use mobile phones so we can provide voice modulation. Also, we have problem on feedback as to know whether the issues which are sorted are useful or not.

IV. CONCLUSION

The development of model villages, called Adarsh Grams, through the implementation of existing schemes, and certain new initiatives to be designed for the local context, which may vary from village to village. Creating models of local development which can be replicated in other villages. Using mobile application as a method to provide a platform for communication and to keep eye on the progress going on in the villages application has provided a platform where this matters can be seen with plain transparency between government and people also helps people keep tab on government policies through this forum. Further sharing of ideas and videos and pictures of progress helps in keeping up with the projects going on and motivates more people to share their ideas. Also giving feedback to the respective MP’s for their lack of work or on any problem related to this can be conveyed through this. Our application has provided a platform where this matters can be seen with plain transparency between government and people also helps people keep tab on government policies through this forum. Further sharing of ideas and videos.
